

Hello Elizabeth,

The exploration depth of each Geoprobe provided on the attached Geoprobe Reports prepared by Haley & Aldrich is not new information. We have already provided the depths obtained (by this third party) on Revised Plan Sheet (11 of 14) within Table 1 – Geoprobe; October 22, 2020 since the report was not yet available on date of our last resubmittal. This Geoprobe Report is for the record file and provides confirmation of the sandy depths of soil illustrated within the profiles provided on revised Plan Sheets (3, 4, 9 & 12). _
